PROJECT

- **HOLIDAY CALENDAR**(Jul 2019-Aug 2019)
Main aim of the project was to fetch holidays list of a specific country through ajax calls and display it on the platform where the designing and other functionalities has been done under **REACT** .
- **BLOGGING WEBSITE**(May 2019-jun 2019)
Under this website a user can register themselves and can create new blogs and posts. This website facilitates the user to edit and delete the blogs as well. One can like and comment on other's blogs too. Project was based on frontend technologies like **HTML, CSS, JS** and **BOOTSTRAP**.
- **RANDOM DOG IMAGES RENDERING**(Jul 2019)
The project was completely based on **AJAX CALLS**. It renders random images of dogs on the click of button
- **HOTEL WEBSITE(THE PATNITOP INN)**(SEP 2019-DEC 2019)
An interactive and responsive website is made by keeping all the basic functionalities in mind. A user can make booking for linens and dining ,and can also ask for personalized facilities . JavaScript libraries used are as follows :-**Baffle.js,Parallax.js,Wow.js**
- **NASA IMAGE GENERATOR**(Jul 2019)
The project was completely based on **AJAX CALLS**. It renders "THE PIC OF THE DAY" image from nasa api and top five pictures captured by satellite.
- **HOTEL MANAGEMENT WEBSITE(HILLCREST)**(AUG 2019-NOV 2019)
An interactive and responsive website is made by keeping all the basic functionalities in mind. A user can make booking for linens and dining ,and can also ask for personalized facilities .
- **SNAKE GAME**(AUG 2019)
The traditional snake game using **JavaScript**
- **FLAPPY BIRD**(DEC 2019)
Game with friendly user interface using **JavaScript**

- **SALON MANAGEMENT WEBSITE(Onward)(MAR 2020 – APR 2020)**
a user friendly and interactive salon website where user can make an indoor and outdoor appointment at their suitable timings .the data gets stored in the database and confirmation message is displayed by the admin not only in the history section of user but also through personalized email. Technology used :- **PHP ,SQL,LARAVEL**
- **MOVIE GUIDE (CINOMORA)(APR 2020)**
The project was a Vue.js website to display Top Rated Movies and Upcoming Movies consuming The Movie Database APIs. A user can even search for a particular movie to get all the latest information. Project is divided into reusable blocks with a proper architecture and clean code
- **TODO APP(JAN 2020)**
Todo app with responsive UI ,by using **javascript**.
- **RECRUITING PORTAL(JobGlobe)(JUN 2020)**
This project was a recruiting portal created by using **REACT** .one can look through the live jobs, can either accept it by storing it in the accepting list or can reject it by storing the rejected jobs in the reject list.
- **TASK TRACKER(Excer Task Tracker)(JUL 2020)**
This task tracker website was created by using **MONGODB Atlas,EXPRESS JS,REACT,NODE JS**.where one can register themselves as an authorized user.they can create new task along with the timeline.privacy of one user's task from another is kept in mind. A timer will show the time left to complete a particular task. There is no timer for completed jobs.user can separately see the tasks which are yet to be done and the already finished tasks.
- **SPOTIFY LIST(MUSICOPHILE)(JUN 2020)**
The projects aims to a user friendly interface where a user can search for songs and a list of songs related to the searched keyword appears .from where one can not only listen to the song but can also add them to their list. It is made like this with the help of **SPOTIFY API** and **React**.
- **TODO APP (AUG 2020)**
The project is framed with the help of **REACT js**, the code has been designed by keeping in mind the architecture of smart components, main focus is on the lifecycle methods, here a user can type the task in the input field and is also facilitated to review the task before adding into the list,one can verify the completed task and delete the one they wish.
i have made two todo apps one which is normally handled by the user and the second one will fetch some todos from an api after that user can add or delete whatever todo they want to.
- **SHOPPING LIST MANAGER(AUG 2020)**
The project has been created with the help of **React Js**. components have been isolated according to their tasks promoting reusability. a user can add as well decrease the amount of particular category in their shopping list . user has been facilitated to delete a particular category, one can reset their choices and can also see the number of unique items
- **MEME GENERATOR(AUG 2020)**
The project revolves around the concept of **API calling (http response)** and how to use value given by the user along with the response from the api. a user can write whatever text they wish to and can create a MEME of their own .
framework used:- **ReactJs**
